

IREF Submission Requirement: Summary of Purpose and Intent of Proposed Bylaw C-7943-2019

Included in this submission is the Administrative Report for the October 22, 2010, Council Meeting. The report includes:

- A description of the purpose, intent, and outcomes of the proposed Intermunicipal Development Plan (IDP) and its impacts;
- A description of the process to prepare the IDP; and
- A policy analysis;

Also included are the minutes from Rocky View County Council on October 22, 2019.

The proposed bylaw includes the IDP as Schedule 'A.' The IDP addresses the requirements established by the *Municipal Government Act*, and was developed in accordance with the principles established in both County's Municipal Development Plans, the South Saskatchewan Regional Plan and the Calgary Metropolitan Regional Board (CMRB) Interim Growth Plan (IGP). It will enhance collaboration between Kneehill County and Rocky View County.

This IREF submission includes a description of each of the Section 6.0 criteria and how the amendments align with the criteria. Many of the policies are not applicable as the area covered by the IDP is primarily used for agricultural purposes. Future non-agricultural uses may be considered in areas identified through a relevant statutory plan, and those policies will be addressed when they become applicable. This has been noted in our accompanying evaluation.

Note: There are several regional transmission corridors and a regional mobility corridor, identified in the Schedules of the IGP, that are not included in this IDP. The reasons for this are:

- Kneehill County is not a member of the CMRB and is not required to comply with the IGP
- The IDP is not proposing any development, it is primarily a document relating to relationship building, notification procedures, and dispute resolution.
- If development is proposed in the future in the IDP area, an ASP will be required which will include the corridors identified in the schedules (if in Rocky View County).

For this application, we have included a regional context map that identifies the transmission and mobility corridors as per the schedules of the IGP.
